

Liftboy

The vertical lifting platform

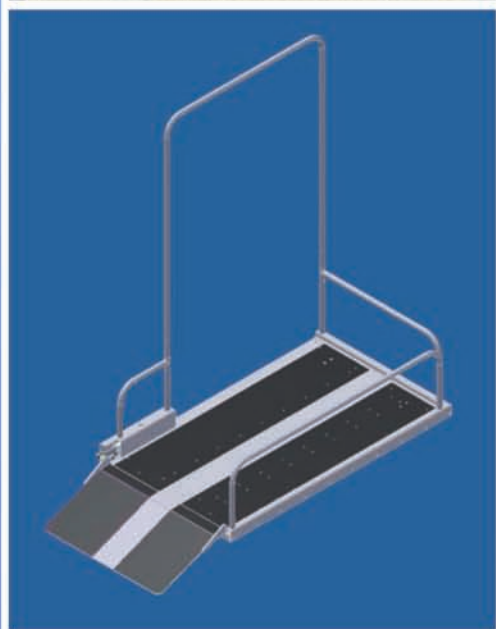

Where ramps are too steep or too long – where stairlifts or elevators are needless due to too small a difference in altitude – the *Liftboy* is the optimal solution.

With the help of our *Liftboy* wheelchair users and physically disabled persons can get over differences in altitude of up to 83 cm.

The *Liftboy* is designed for indoor and outdoor use! As the weatherproof lifting platform with a total weight of only 70 kg can easily be put up, it offers a perfect solution also for urgent cases.

Life without barriers

Liftboy - Mobility and Independence

A 24-V-motor, which is connected via a transformer with a socket, lifts the *Liftboy* up and down.

A manual ramp (or optionally an electrically adjustable ramp) guarantees easy access to the lifting platform.

Main features of the *Liftboy*:

- Very low weight - easy to transport
- No on-site fixing/modifications necessary
- Easy and fast installation
- Suitable for indoor and outdoor installation
- Silent operation
- Lateral entry / exit possible
- Standard color RAL 7035 - Special color optional

Standard Specifications

Typ	1	2
Max. lifting height	595mm	830mm
Loading capacity max.	180kg	300kg
Lifting speed	10mm/s	10mm/s
Min. height	100mm	120mm
Weight	52,5kg	71,5kg
Power supply	24V via Trafo 230 V power supply	
Internal dimension length	1170mm	1495mm
Internal dimension width	710mm	785mm
External dimension length	1180mm	1505mm
External dimension width	810mm	890mm
